ASX:ELT

TIN FOR AN ELECTRIC TOMORROW

Annual General Meeting | 16 November 2020

ELEMENTOS

Cautionary statement

The Economic Study (Study) referred to in this announcement has been undertaken for the purpose of assessing the technical and economic viability of developing the Oropesa Tin Project. The Study has been completed to an overall Scoping Study level of accuracy of +/- 35%. It should be noted that a number of the work streams in the Study have been undertaken to a more detailed standard of evaluation and definition.

The Study is preliminary in nature, it includes inferred Mineral Resources that are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as Ore Reserves, and there is no certainty that the Study outcomes will be realised. Mineral Resources are not Ore Reserves and do not have demonstrated economic viability. There is no certainty that all or any part of the Mineral Resources estimated will be converted into an Ore Reserves estimate.

While the estimate of Mineral Resources may be materially affected by environmental, permitting, legal, title, taxation, socio-political, marketing, or other relevant issues, the Company is not aware of any such issues. The quantity and grade of reported Inferred Resources are uncertain in nature and there has been insufficient exploration to define these Inferred Resources as an Indicated or Measured Mineral Resource and it is uncertain if further exploration will result in upgrading them to an Indicated or Measured Mineral Resource category.

The Study outcomes, production target and forecast financial information are based on information that are considered to be at Scoping Study level. The information applied in the Study is insufficient to support the estimation of Ore Reserves. While each of the modifying factors was considered and applied, there is no certainty of eventual conversion to Ore Reserves or that the production target will be realised. Further exploration work and evaluation studies are required before Elementos will be in a position to estimate any Ore Reserves or provide any assurance of an economic development case.

Given the uncertainties involved, investors should not make any investment decisions based solely on the results of the Study. The Study is based on the Measured, Indicated and Inferred Resources as estimated by SRK in the Mineral Resource Estimate released on the ASX on 31st July 2018, "Acquisition of the Oropesa Tin Project". Elementos is not aware of any new information or data that materially affects the information included in that release. All material assumptions and technical parameters underpinning the estimates in that ASX release continue to apply and have not materially changed.

Of the Mineral Resources scheduled for extraction in the Study mine production plan, approximately 4% are classified as Measured, 78% as Indicated and 18% as Inferred. There is a low level of geological confidence associated with Inferred Mineral Resources and there is no certainty that further exploration work will result in the determination of Indicated Mineral Resources or that the production target itself will be realised. Inferred Resources do not contribute to the production schedule in the first two years of operations and only 1% in the first nine years of the proposed development. The production plan includes Inferred Resources in the latter stages of the production schedule.

This release contains a series of forward-looking statements. The words "expect", "potential", "intend", "estimate" and similar expressions identify forward-looking statements. Forward-looking statements are subject to known and unknown risks and uncertainties that may cause the actual results, performance or achievements to differ materially from those expressed or implied in any of the forward-looking statements in this release that are not a guarantee of future performance.

Statements in this release regarding the Elementos business or proposed business, which are not historical facts, are forward-looking statements that involve risks and uncertainties. These include Mineral Resource Estimates, metal prices, capital and operating costs, changes in project parameters as plans continue to be evaluated, the continued availability of capital, general economic, market or business conditions, and statements that describe the future plans, objectives or goals of Elementos, including words to the effect that Elementos or its management expects a stated condition or result to occur. Forward-looking statements are necessarily based on estimates and assumptions that, while considered reasonable by Elementos, are inherently subject to significant technical, business, economic, competitive, political and social uncertainties and contingencies. Since forward-looking statements address future events and conditions, by their very nature, they involve inherent risks and uncertainties. Actual results in each case could differ materially from those currently anticipated in such statements. Investors are cautioned not to place undue reliance on forward-looking statements.

Elementos has concluded that it has a reasonable basis for providing these forward-looking statements and the forecast financial information included in this release. This includes a reasonable basis to expect that it will be able to fund the development of the Oropesa Tin Project upon successful delivery of key development milestones. The detailed reasons for these conclusions are outlined throughout this ASX release and in Appendix 1 (JORC Code 2012, Table 1. Consideration of Modifying Factors). While Elementos considers all of the material assumptions to be based on reasonable grounds, there is no certainty that they will prove to be correct or that the range of outcomes indicated by the Economic Assessment Study will be achieved. To achieve the range of outcomes indicated in the Economic Assessment Study, pre-production funding in excess of US\$70m will likely be required. There is no certainty that Elementos will be able to source that amount of funding when required. Discussions with potential funders have confirmed that a project of this scale will be able to be funded with a combination of Debt and Equity. The company is confident that the capital costs are sufficiently low that raising the required equity will be possible. The company continues to have the full support of its existing largest shareholders and is working with potential offtake partners, brokers, private equity firms and traditional funders to ensure that the Company will be in a position to fund the project as needed. It is also possible that Elementos could pursue other value realisation strategies such as a sale, partial sale or joint venture of the Oropesa Tin Project. This could materially reduce Elementos' proportionate ownership of the Oropesa Tin Project.

No Ore Reserve has been declared. This ASX release has been prepared in compliance with the current JORC Code (2012) and the ASX Listing Rules. All material assumptions, including sufficient progression of all JORC modifying factors, on which the Production Target and forecast financial information are based have been included in this ASX release.

Tin for an electric tomorrow

Our vision is to become a major global tin producer.

- Two world class tin projects with large resource bases and significant exploration potential in mining-friendly locations.
- Economic Study shows Oropesa Tin Project is one of the world's highest-grade, lowest cost tin projects (NPV8% of US\$92 million at very low capex of US\$52m).
- Experienced leadership team has skin in the game (11.4% ownership) and strong shareholder support.

- Raised A\$773,000 from an oversubscribed Share Purchase Plan (SPP) in September, more than double the original target of A\$300,000.
- The funds raised under the SPP are in addition to the A\$2,552,000 raised in the private placement completed in August 2020.
- 50-hole drill program currently underway at Oropesa.

Elementos

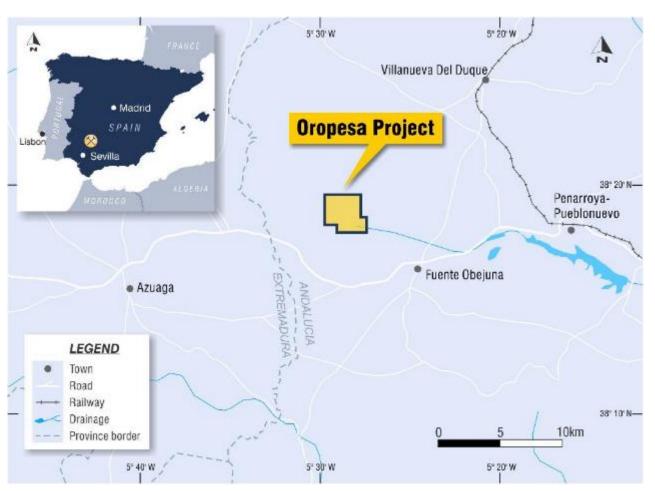

Firm strategy in place to deliver value catalysts.

Oropesa drilling and optimisation program and subsequent JORC Resource upgrade.

Finalise Oropesa environmental and permitting activities.

Oropesa Definitive Feasibility Study, offtake and financing.

Progressing opportunities to unlock value from the Cleveland Tin Project in Tasmania.

- Project acquired in 2019 (100%) with more than US\$26 million invested in project development.
- Planned open-cut mining operation and conventional processing facility producing tin concentrates to be shipped to smelters in Europe/Asia.
- Strong local support for the project.
- The mining friendly Andalucian region, is home to some of Spain's largest mines:
 - The Cobre Las Cruces Copper Mine, owned by First Quantum Minerals
 - The Rio Tinto Copper Mine, owned by Atalaya Mining

One of the world's highest grade open-cut tin projects

- Economic Study Production Target derived from 2018 JORC Mineral Resource.
- Resource includes 253 drill holes (54,026 metres).
- Significant JORC Exploration Target highlights potential to expand resource.

Economic Study (May 2020)

Oropesa Economic Study follows extensive drilling, geological, geotechnical, feasibility and metallurgical test work programs over more than 10 years.

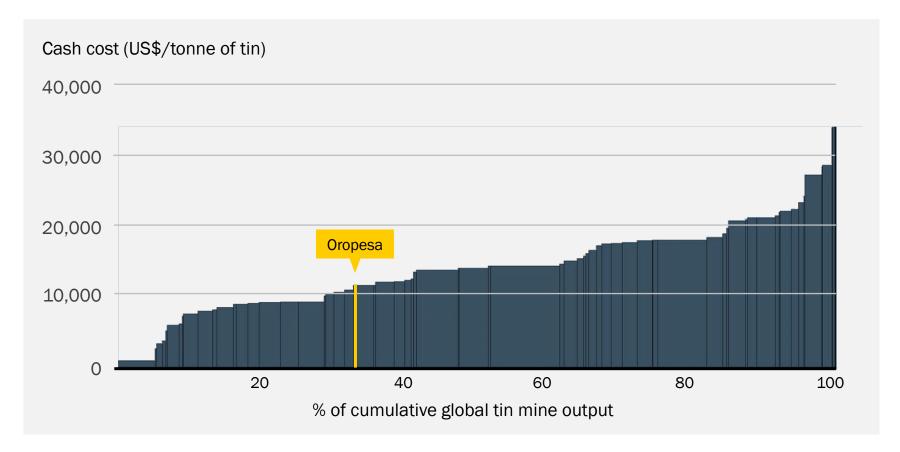

Tin price Annual ore feed Annual metal production Annual gross revenue US\$19,750/t* 750,000tpa US\$48m 2,440tpa *The price is below the 10-year average CAPEX+ All-in-sustaining costs Annual operating costs LME tin price of approximately US\$20,500/t. US\$52m US\$28m US\$11,800/t *Capital development costs include a 20% contingency. Pre-tax NPV8% Post-tax IRR Annual operating margin 25% US\$92m US\$20m

Gross revenue x 14 years US\$674m Project life

x 14 years Project life

Total project EBITDA US\$281m

Potential to be bottom quartile cash cost

- Oropesa cash cost compares favourably against other tin developments around the world.
- Resource optimisation and drilling program has potential to reduce Economic Study waste-toore ratio

Source: International Tin Association

Drilling and optimisation started in October to increase Oropesa's overall resource, annual production and mine life.

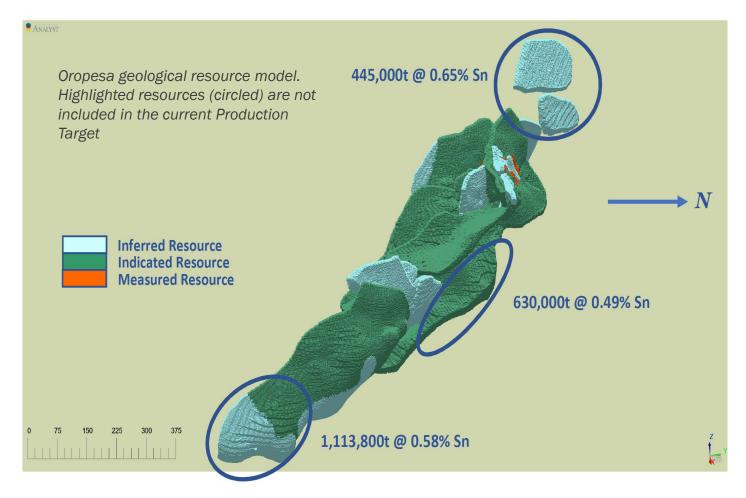

Economic Study outcomes were positive but there are number of areas identified that have the potential to enhance the project's economics.

Three key areas of optimisation potential, include:

- 1. New drilling
- Incorporating the lower grade tin halo into the JORC Resource Model
- Re-examining existing drill core and geological interpretation

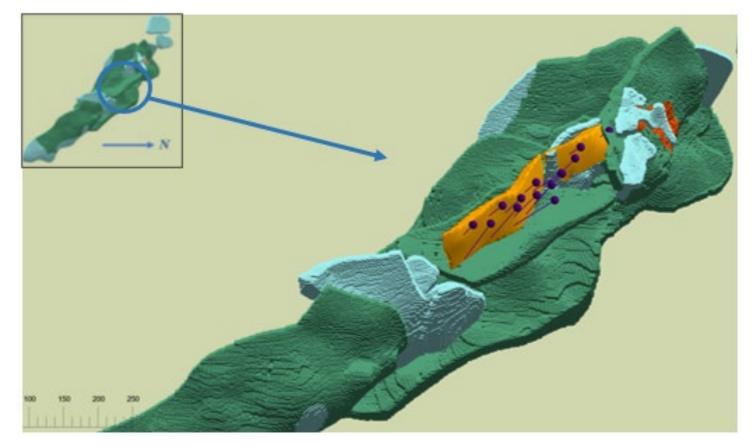

1. New drilling - Resource conversion

- Drilling program is targeting the conversion of near surface Inferred Resources to Indicated Resources.
- This will result in an improved wasteto-ore stripping ratio by incorporating additional mineral resources into a future mineral resource.

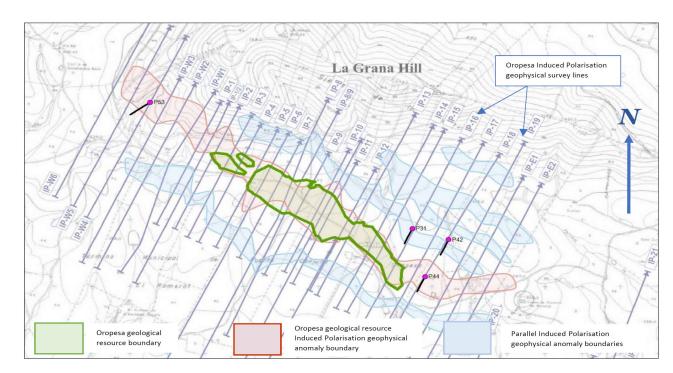

1. New drilling - Incorporating fault controlled mineralisation

- Second priority is to confirm interpreted near-surface faultcontrolled mineralisation that has been identified from historical exploration data.
- Potential to significantly expand the mineral resource, especially at shallow levels.

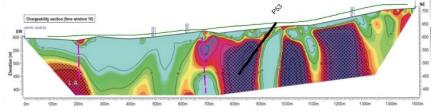

Proposed drilling program on interpreted near-surface fault-controlled mineralisation

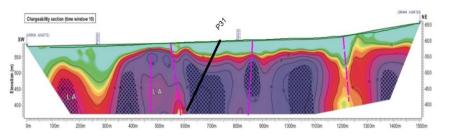

1. New drilling - Wider tenement potential

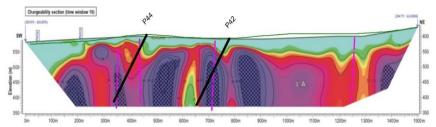

Geophysical and geochemical studies indicate there is significant potential to identify new tin mineralisation within the wider tenement area at Oropesa.

IP chargeability anomalies on survey line 16 showing location of proposed exploration drill hole P31

IP chargeability anomalies on survey line 18 showing location of proposed exploration drill holes P42 & P44

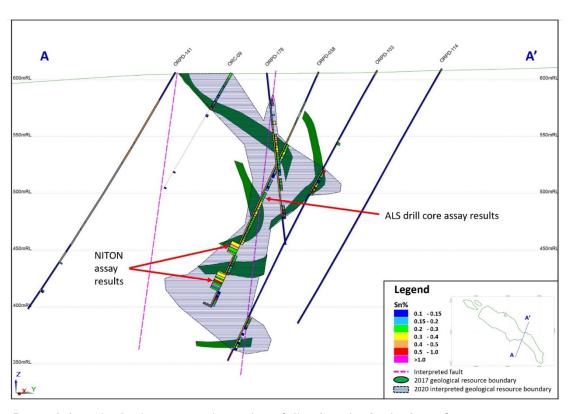

2. Incorporating the lower grade tin halo into the JORC Resource Model

- Tin mineralisation within this low-grade halo is currently excluded from the JORC geological resource that was used in the Economic Study Production Target.
- The Economic Study Production Target assumed 10% mining dilution at a 0% Sn grade. Incorporating the low grade mineralisation in a new JORC geological resource will increase the tin content of the dilution material.
- This is likely to result in an increase in tin production at no additional mining cost.

3. Re-examining existing drill core and geological interpretation

- 173 early exploration diamond drill holes have been identified which show the potential for having additional tin mineralisation not in current mineral resource.
- Re-examining these drill holes using drill core logging, NITON XRF analysis, and assaying.
- Re-interpretation of existing geological data and followup confirmation drilling will allow estimation of a new JORC Mineral Resource.

Potential geological resource boundary following the inclusion of new core assay data, inclusion of the low grade halo and stratigraphical and fault-controlled mineralisation.

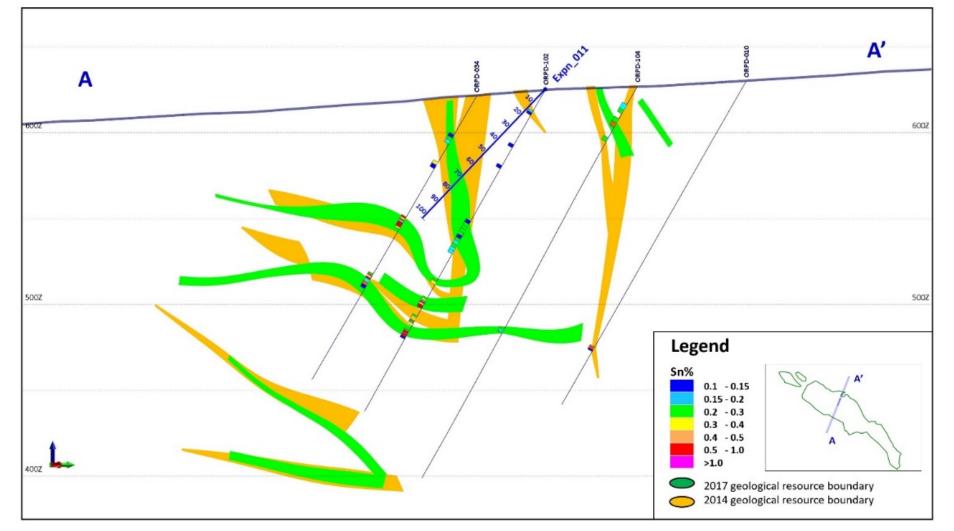

Drilling Oct 2020: Visible mineralisation

- Six holes drilled to date.
- Significant development of oxidised sulphide and mineralising textures have been recognised in the core of Expn_011 in three separate zones down hole.
- The zones of mineralisation within Expn_011 are from 9 - 24m, 55 - 70m and 74 - 87.6m.

Expn_011 from 66.7m - 70.2m. Significant oxidation of sulphide mineralisation and textures typical of tin mineralised zones at Oropesa.

Drilling: Expn_011

Drilling: Hole P53

- Sighted 600m NW of the Oropesa geological resource, drill hole P53 intersected fresh semi-massive sulphide mineralisation from a down hole depth of 188.9 to 190.2m.
- The mineralisation is contained within a steeply dipping structure that coincides with an IP anomaly within a quartzite.
- No replacement mineralisation within sandstones that typifies the mineralisation at Oropesa was intersected in this drill hole.

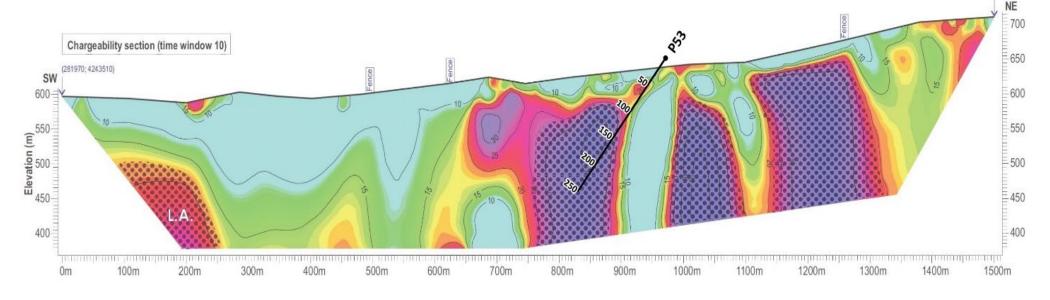

Exploration drill hole P53 depicting from semi-massive sulphide mineralisation from 189.2m – 190.2m

Cleveland Tin Project

- Cleveland Tin Project (100%-owned) located in mineral rich northwest Tasmania.
- Operated as an underground mine by Aberfoyle Resources from 1968 to 1986 – demonstrated mining and metallurgical outcomes.
- Significant endowment of tin-copper tailings, open-cut and underground JORC Mineral Resources. Large, separate, tungsten porphyry resource below tin deposit.
- Tailings and underground pre-feasibilities studies completed.
- Technical assessment of optimal development pathway underway new open-cut mineable resource 'game changer' for simplified, lowcapex startup development concept.

Tin market summary

New tin production required

- Global tin demand is steadily increasing as its services the technology revolution
- Electronics, communications, IT renewable energy, and electric vehicles are all growth industries needing tin.
- Existing tin mines are producing from lower grade, diminishing resources.
- New supply is limited as potential projects are either high CAPEX underground mines, low grade open pit mines or located in risky jurisdictions.

Elementos

Strong leadership

Andy Greig Non-Exec Chairman

Andy has 35 years of experience in the mining and natural resource industry with Bechtel Group Inc., a global engineering, construction and project management company. Mr. Greig has held numerous positions with Bechtel, most recently as SVP and Global Manager of Human Resources. Mr. Greig served on the Bechtel Board as a Director and was President of the Mining and Metals Global Business Unit.

Chris Dunks
Executive Director

Currently the Managing Director of Synergen Met, Chris was a founder and Managing Director of Rockwell Minerals, the company that merged with Elementos in 2013. Christopher's experience over the last 20 years has been dominated by working on major minerals processing, refining and power projects both in Australia and the USA.

Corey Nolan Non-Exec Director

Corey is an accomplished public company director whose 30-year career in the resources industry started on the ground in operations before spanning a broad range of corporate roles from equities analyst and corporate finance director to a number of senior executive and board positions. He has been Managing Director of ASX listed Platina Resources Limited since August 2018.

Calvin Treacy
Non-Exec Director

Calvin has over 20 years senior management experience in mining, mining technology and manufacturing. He has a strong track record of founding and growing companies, and brings a wealth of experience in the areas of strategic planning and capital raising. He has worked in a range of roles including Non-executive Director, Chief Executive Officer, Chief Operating Officer and Production Manager.

Brett Smith
Non-Exec Director

Mr Smith has over 30 years' experience in the resources, construction and engineering industries in senior operational and financial positions. Mr Smith is Executive Director of Hong Kong listed Dragon Mining which has operating gold mines and processing plants in both Finland and Sweden. Mr Smith is also Deputy Chairman of Hong Kong listed resources investment company APAC Resources and Executive Director of ASX listed company Metals X.

Elementos

Investment summary

- Economic Study shows very strong investment case for the Oropesa Tin Project.
- Drilling and optimisation plan to increase Oropesa's overall resource, annual production and mine life.
- Strategy being implemented to become a significant global tin producer within five years.

- Oropesa Exploration Target estimated at between 35-51mt @ 0.46 to 0.62% tin*
- Board and management experienced in exploration, development, construction and operations globally.
- Opportunity for additional production from Cleveland Tin Project in Tasmania.

^{*} The potential quantity and grade of the Exploration Target is conceptual in nature and therefore is an approximation. There has been insufficient exploration to estimate a Mineral Resource and it is uncertain if further exploration will result in the estimation of a Mineral Resource.

Forward-looking statements

This document may contain certain forward-looking statements. Such statements are only predictions, based on certain assumptions and involve known and unknown risks, uncertainties and other factors, many of which are beyond the company's control. Actual events or results may differ materially from the events or results expected or implied in any forward-looking statement. The inclusion of such statements should not be regarded as a representation, warranty or prediction with respect to the accuracy of the underlying assumptions or that any forward-looking statements will be or are likely to be fulfilled. Elementos undertakes no obligation to update any forward-looking statement to reflect events or circumstances after the date of this document (subject to securities exchange disclosure requirements). The information in this document does not take into account the objectives, financial situation or particular needs of any person or organisation. Nothing contained in this document constitutes investment, legal, tax or other advice.

Mineral Resource & Exploration Target

Elementos confirms that Mineral Resource and Reserve estimates and Exploration Targets used in this document were estimated, reported and reviewed in accordance with the guidelines of the Australian Code for the Reporting of Exploration Results, Mineral Resources and Ore Reserves (The JORC Code) 2012 edition. Elementos confirms that it is not aware of any new information or data that materially affects the Mineral Resource, Reserve or Exploration Target information included in the following announcements:

- *1 "Acquisition of Oropesa Tin Project" released on 31 July 2018
- *2 "Significant Increase in Cleveland Open Pit Resource" released on 26 September 2018
- *3 "Oropesa Exploration Target" released on 4th February 2019
- *4 "Oropesa Tin Project Presentation to the 3rd Mining and Minerals Hall Conference" released on 18 October 2019
- *5 "Visible mineralisation intersected in Oropesa diamond drill holes" released on 09 November 2020

The Company also confirms that all material assumptions and technical parameters underpinning the estimates in the Cleveland Mineral Resources and Reserves continue to apply and have not materially changed. Elementos also confirms the form and context in which the Competent Person's findings are presented have not been materially modified from the date of announcement.

Competent Person Statement

The information in this report is based on and fairly represents information and supporting documentation that has been compiled for this report. Mr Chris Creagh is a consultant to Elementos Ltd. Mr Creagh has reviewed and approved the technical content of this report. Mr Creagh is a Competent Person as defined in the 2012 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves (JORC Code 2012). Mr Creagh is a Member of the Australasian Institute of Mining and Metallurgy and consents to the inclusion in the report of the matters based on the information in the form and context in which it appears.
